

Gentile cliente,

nel 2010 ricorre il 25° anniversario della nascita di Briko. Il 2010 è anche l'anno in cui Briko apre definitivamente un nuovo ciclo dal punto di vista del prodotto: che si parli di neve o di ciclismo, il Briko Lab è pienamente operativo. La motivazione del team di lavoro è alle stelle e di conseguenza l'entusiasmo dei nostri partner e dei nostri atleti consentono di dare un valore aggiunto sempre più concreto all'innovazione promossa attraverso i tre programmi che Briko ha istituito: Briko Safety Program per garantire la massima sicurezza possibile, Briko Kare Program per offrire sempre più comfort e Briko Style Program perché il look sportivo è anche stile di vita. Dunque, ancora grandissime novità e innovazioni "made in Briko".

Venticinque anni rappresentano l'età in cui, provata la propria performance agonistica, un atleta getta le basi per diventare un campione maturo e un esempio per gli altri, e così vogliamo che sia anche per Briko. Infatti la passione, l'entusiasmo e la motivazione che animano il Team Briko si stanno materializzando in una collezione di prodotti veramente al top.

Briko riafferma i propri valori di marca alla ricerca della "beautiful performance" nel mondo del ciclismo attraverso un'offerta completa di abbigliamento e accessori che trovano nelle varie linee la naturale risposta tecnica e stilistica ad ogni condizione climatica ed esigenza.

Il lavoro e la collaborazione con Paolo Bettini con cui si condivide la passione e la volontà di raggiungere obiettivi tecnici estremamente elevati prosegue con reciproca soddisfazione.

Guardare avanti, fare tesoro della propria esperienza, puntare all'eccellenza sono valori e obiettivi propri del DNA di Briko e che vogliamo sintetizzare in una serie di prodotti eccellenti dal total look: la linea Protek, l'occhiale STINGER e il casco Mustang. Novità da non perdere.

A handwritten signature in black ink, reading 'Carlo Boroli'.

Carlo Boroli

Presidente Briko s.r.l.
cboroli@briko.com

Dear Customer,

2010 will mark Briko's 25th anniversary. 2010 will also be the year when Briko will decisively start a new cycle as far as its products are concerned: be it snow or cycling, the "Briko Lab" is working at full speed. The working team's motivation level is sky-high, and consequently the enthusiasm of our partners and our athletes allows us to attach increasingly tangible added value to the innovation promoted by Briko's three ongoing programmes: Briko Safety Program - to ensure the highest possible safety; Briko Kare Program - to offer more and more comfort; and Briko Style Program - because having a sporty look also means having a specific life style. In a nutshell, more "made-in-Briko" innovations and outstanding new features are on their way.

Twenty-five years are an age when after proving their professional performances, any athlete lays the foundations to become a mature champion and set an example for the others. We want the same thing to happen with Briko. Indeed, the passion, enthusiasm, and motivation of the Briko Team are now being embodied by a new collection of world-class products.

Briko reaffirms its brand values looking for a "beautiful performance in the world of CYCLING, through a complete range of garments and accessories coming in different lines representing the natural technical and stylistic response to any and all needs and climate conditions.

Our work and cooperation with Paolo Bettini, with whom we share our passion and the will to achieve extremely advanced technical objectives, is continuing to our mutual satisfaction.

Looking ahead, treasuring one's experience, and focusing on excellence are all values and objectives that are part of Briko's DNA and that we want to express through a series of extraordinary total-look products: the Protek line, the STINGER glasses, and the Mustang helmet. New, unmissable items.

Geehrter Kunde,

im Jahr 2010 feiert Briko sein 25. Gründungsjahr. Das Jahr 2010 ist auch das Jahr, in dem Briko endgültig einen neuen Zyklus bezüglich des Produkts antreten wird: Briko Lab ist sowohl für den Bereich Winter- als auch Radsport voll operativ. Die Motivation des Arbeitsteams ist auf dem Höchstpunkt. Demzufolge kann der Enthusiasmus unserer Partner und unserer Athleten der Innovation einen immer konkreteren Zusatzwert geben, welche durch die drei von Briko eingeführten Programme gefördert wird: das Briko Safety Program für die höchstmögliche Sicherheit, das Briko Kare Program für immer mehr Komfort und das Briko Style Program, weil sportlicher Look auch ein Lebensstil ist. Es wird also noch sehr große Neuheiten und Innovationen „Made in Briko“ geben.

Fünfundzwanzig Jahre stellen ein Alter dar, in dem ein Athlet mit einer nachweisbaren Performance im Leistungssport die Grundlage dafür schafft, ein reifer Champion und Beispiel für andere zu werden. Wir möchten, dass es auch für Briko so ist. Diese Leidenschaft, dieser Enthusiasmus und diese Motivation, die das Briko Team beflügeln, drücken sich in einer wahrhaften Spitzenproduktkollektion aus.

Briko bestätigt anhand eines Komplettangebots an Bekleidungs- und Zuberhörartikel, welche in verschiedenen Linien die natürliche technische und stilistische Antwort auf alle Klimabedingungen und Anforderungen finden, seinen Wert als Markenzeichen auf der Suche nach "A beautiful Performance" in der Welt des RADSPORTS.

Die Arbeit und Kollaboration mit Paolo Bettini, mit dem Briko die Leidenschaft und den Willen, sehr hohe technische Ziele zu erreichen, teilt, geht mit gegenseitiger Zufriedenheit weiter.

Das Vorausblicken, die Nutzung der eigenen Erfahrungen, die Suche nach neuen Motivationen und das Streben nach Perfektion sind Werte und Ziele im DNA von Briko, die wir in einer exzellenten Produktreihe von Totallook zusammenfassen möchten: die Linie Protek, die Brille STINGER und der Helm Mustang. All dies sind Neuheiten, die man nicht versäumen sollte.

Cher client,

En 2010 tombe le 25ème anniversaire de la naissance de Briko. 2010 sera aussi l'année où Briko ouvre définitivement un nouveau cycle du point de vue du produit : qu'il s'agisse de neige ou de cyclisme, le Briko Lab est pleinement opérationnel. Cette équipe étant extrêmement motivée, l'enthousiasme de nos partenaires et de nos athlètes permettront de donner une valeur ajoutée de plus en plus concrète à l'innovation promue à travers trois programmes institués par Briko : Briko Safety Program pour garantir la plus grande sécurité possible, Briko Kare Program pour offrir plus de confort et Briko Style Program parce que le look sportif est aussi un style de vie. Voilà, encore de grandes nouveautés et innovations "made in Briko".

Vingt-cinq ans représentent l'âge où un athlète, après avoir testé sa performance sportive, jette les bases pour devenir un champion mûr et un exemple pour les autres, nous voulons qu'il en soit ainsi pour Briko. En effet, la passion, l'enthousiasme et la motivation qui animent l'Equipe Briko sont en train de se matérialiser en une collection de produits haut de gamme.

Briko affirme de nouveau ses valeurs de marque à la recherche de la "beautiful performance" dans le monde du CYCLISME à travers une offre complète de vêtements et d'accessoires qui trouvent dans les différentes lignes la réponse technique et stylistique naturelle pour chaque condition climatique et chaque exigence.

Le travail et la collaboration avec Paolo Bettini qui partage notre passion et notre volonté d'atteindre des objectifs techniques extrêmement élevés continuent avec une satisfaction réciproque.

Regarder en avant, faire trésor de son expérience, viser à l'excellence sont des valeurs et des objectifs qui font partie de l'ADN de Briko et que nous voulons résumer en une série de produits excellents Total look : la ligne Protek, les lunettes STINGER et le casque Mustang. Voilà des nouveautés à ne pas perdre.

PAOLO BETTINI

RESEARCH LAB

BRIKO LAB NEVER STOP SEARCHING

EN BRIKO LAB was officially set up in January 2009 as a research & development centre for product innovation, a place to combine Briko's racing tradition with the know-how and specialty resources of today's high-tech industries. Its objective is that of designing, testing and developing innovative product solutions for both athletes and sports enthusiasts alike, while benefiting from a 25-year history - with victories in all the most important international competitions, utilizing the continuous contribution of its professional athletes. In a highly-competitive market where product development and innovation are crucial to success, the BRIKO LAB will take to the lead in creating the next generation of manufacturing methods and products alike.

IT Il BRIKO LAB nasce ufficialmente a Gennaio 2009; è il centro di ricerca e sviluppo per l'innovazione del prodotto; coniuga la tradizione di Briko nel racing con il know-how e le risorse più specializzate nei settori industriali high tech. Ha come obiettivo quello di progettare, testare e realizzare soluzioni innovative nella creazione di ogni nuovo prodotto BRIKO destinato ad atleti professionisti e amatori. La presenza sul mercato da 25 anni, le vittorie in tutte le competizioni internazionali di massimo livello e la collaborazione continua di atleti professionisti contribuiscono all'evoluzione del Briko Lab. In un mercato altamente competitivo dove lo sviluppo del prodotto e l'innovazione costituiscono i fattori critici di successo è necessario creare i presupposti per primeggiare, rispetto ai competitors, nei tempi di realizzazione e nella qualità delle soluzioni applicate al prodotto. Nascono i tre programmi di Briko: Briko Safety Program, Briko Kare Program e Briko Style Program.

FEEL LIGHTER & SAFER JUST ENJOY THE RIDE

BRIKO CERAMICAPROTEK™

CeramicaProtek™ becomes anti-shock!!!

A combined protection, entirely made of anti-shock material on the inside and externally lined with anti-abrasion CeramicaProtek™ fabric. Memory 20 – a last-generation anti-shock protection characterized by excellent energy absorption features – is a PNB expanded viscoelastic nitrile rubber which perfectly adapts to the body. In the event of a fall, the outside lining protects from abrasions, while the internal padding absorbs the shock and distributes it over a larger surface, while also ensuring outstanding breathability and normal freedom of movement.

SAFE VISIBILITY

The Briko Safety Program introduces the concept of Safe Visibility, the result of functionality and design studies: technical fabrics in bright, vivid colours with pipings, inserts, and reflective logos. The fluorescent colours – green for men and coral for women – result in great brightness and represent Briko's unmistakable mark, ensuring perfect visibility at all times and in all possible light conditions.

BRIKO WE CARE

PRIMALOFT FABRIC

PrimaLoft® One is the ultimate insulating microfibre. Its ultra-thin fibres undergo a special treatment applying a patented process and are then combined to form an extremely soft, thin, light, and waterproof insulating core. PrimaLoft One absorbs 3 times less water and it is 14% warmer, when dry, and 24% warmer, when

wet, than standard insulating materials. It is ideal for sports garments thanks to its limited thickness - 1/5 that of feathers - which ensures great freedom of movement. Wearing it means being "technically pampered"!

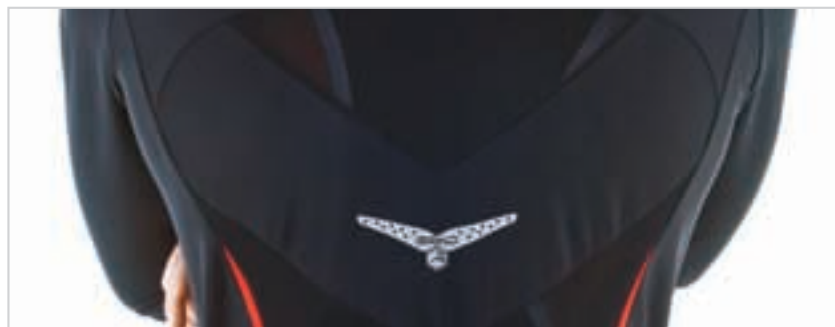

"8 SPOTS" AERATION SYSTEM

Briko Kare Program's "8spots" aeration system is obtained by combining two meshed laser-perforated fabrics. Positioned strategically, these fabrics ensure constant breathability even in anti-wind and anti-rain garments, thus allowing the body to expel more sweat than with even the most-advanced breathable fabrics, while preserving natural body heat. More aeration means more freshness and, consequently, more power and acceleration throughout any performance.

3D MESH

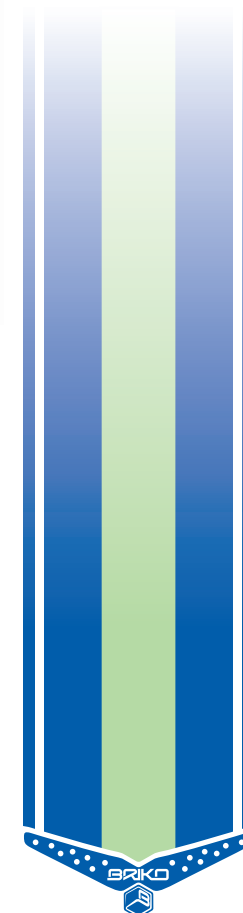

This is a 4 mm-thick 3D mesh whose special features allow to expel perspiration, while the 3D structure prevents the inlet of air from the outside. Applied on the back, this mesh allows the body to better expel perspiration, while preserving natural body heat.

BRIKO BE YOURSELF

BRIKO TEAM LEITMOTIV

In the W10/11 collection Briko Style Program presents the "BRIKO TEAM" Leitmotiv – a series of colours and graphic elements by which all amateurs can feel represented. Strong, vivid colours that become the brand's unmistakable mark.

BRIKO OPTICAL PROGRAM

NEW STINGER

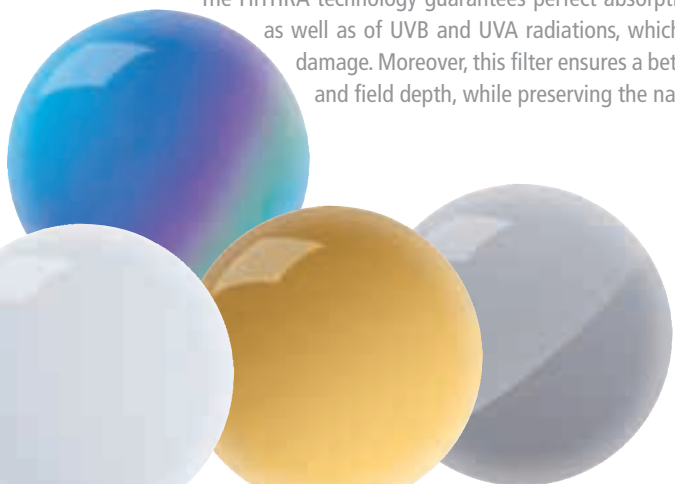

The comeback of Briko's most famous glasses, in which design and technology combine to bring a sporty classic back to life. Conceived for both the cycling and the skiing worlds, the Stinger glasses are fitted with special accessories which increase their performances in all possible conditions.

FILTHRA LENS TECHNOLOGY

Briko proposes a new line of lenses which joining the by-now legendary Thrama lenses. The FILTHRA lenses come in a wide range of categories, colours and mirroring effects matched with the most appropriate type of glasses, depending on the specific application, user, and frame design.

The FILTHRA technology guarantees perfect absorption of the blue light wave as well as of UVB and UVA radiations, which are responsible for sight damage. Moreover, this filter ensures a better perception of contrasts and field depth, while preserving the natural colour balance.

BRIKO HELMETS PROGRAM

Paint helmet
for kids

Maximum safety and visibility also in urban traffic. Its graphic design aims at ensuring visibility, with high-impact yellow/orange fluorescent colours and 3M reflective Briko logos positioned in strategic areas.

ICON COMPREHENSION GUIDE

ENVIRONMENT

Each Briko lens has been designed and made for use in a specific environment: in the mountains, on land or near water.

BRIGHTNESS

The icons depict the various brightness conditions: intense, medium-high, medium and poor.

TREATMENTS

Mirrored: special mirroring treatment that allows excessive light to be reflected, thus increasing visual comfort.

Antifog: treatment that prevents the lenses to mist up, thus preventing visibility problems in critical conditions.

LIGHT TRANSMISSION

The value indicates the percentage of light that the lens lets pass through: the higher the value, the less quantity of light that the lens absorbs.

FILTER CATEGORY

Value assigned by the European standards to identify the lens absorption range: the higher its value, the greater the amount of light that the lens absorbs and the less light it lets pass through.
